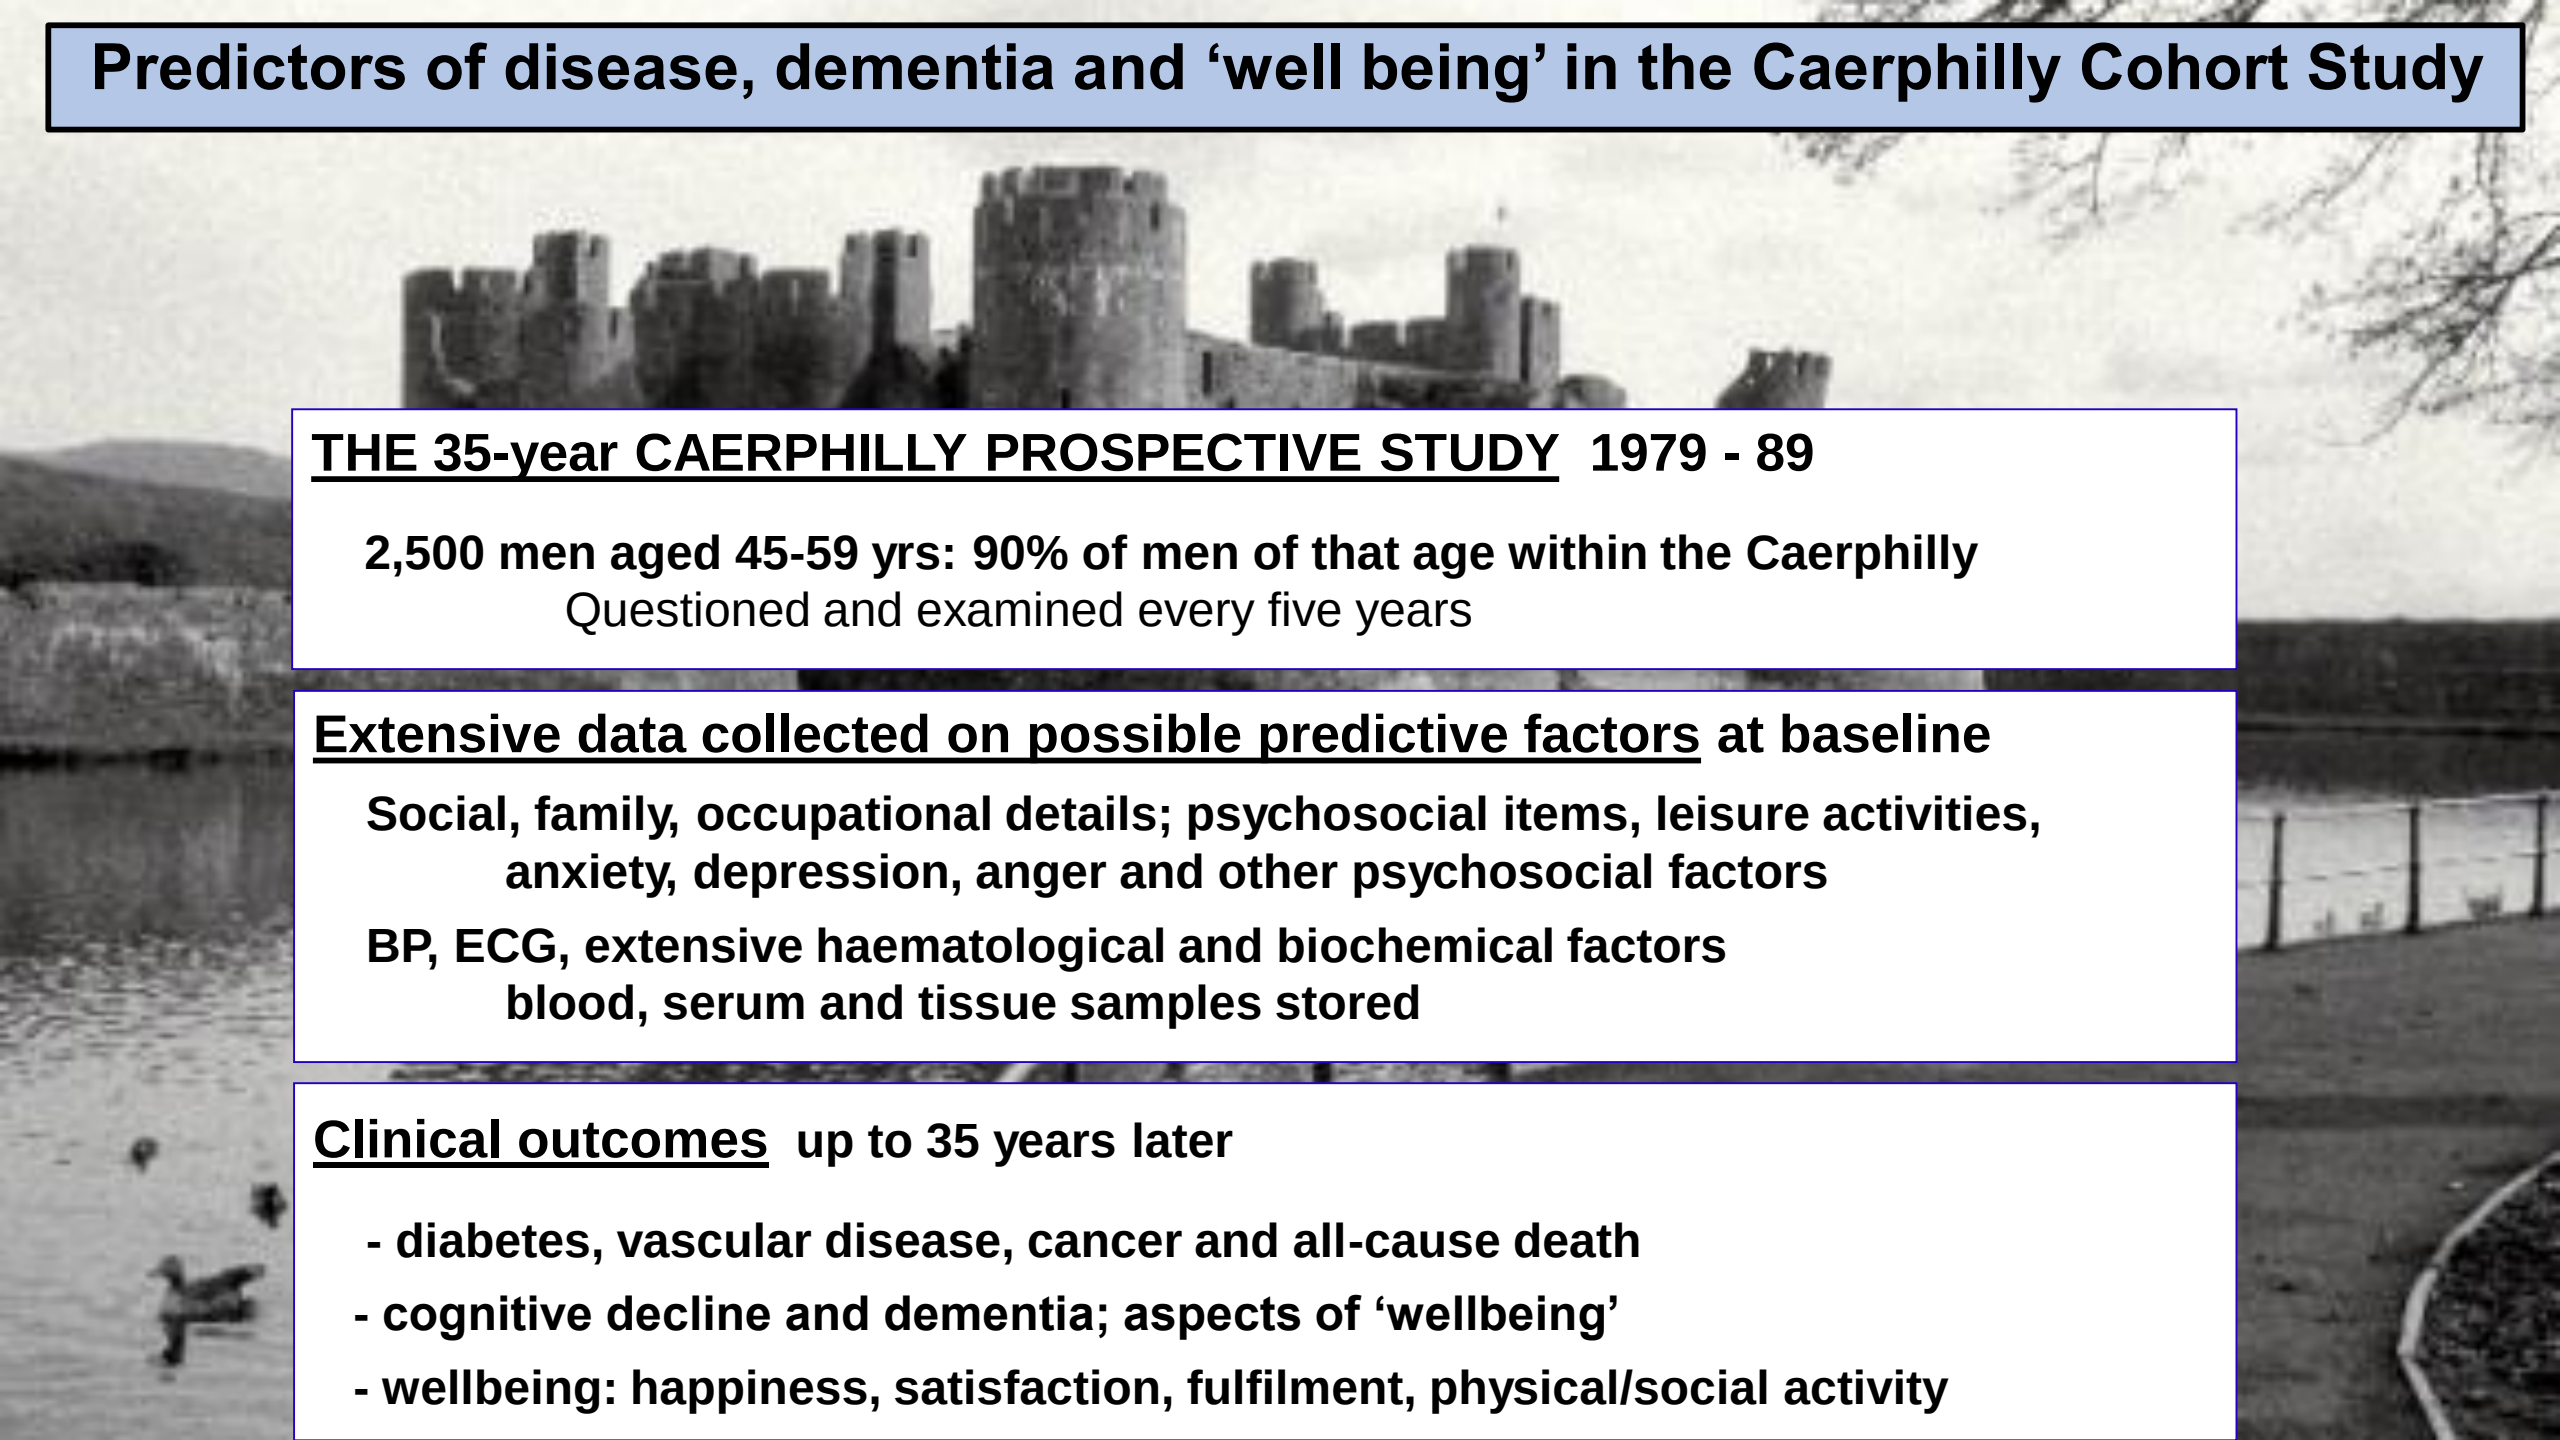
Predictors of disease, dementia and ‘well being’ in the Caerphilly Cohort Study

Predictors of disease, dementia and ‘well being’ in the Caerphilly Cohort Study



THE 35-year CAERPHILLY PROSPECTIVE STUDY 1979 - 89

2,500 men aged 45-59 yrs: 90% of men of that age within the Caerphilly
Questioned and examined every five years

Extensive data collected on possible predictive factors at baseline

Social, family, occupational details; psychosocial items, leisure activities, anxiety, depression, anger and other psychosocial factors

BP, ECG, extensive haematological and biochemical factors
blood, serum and tissue samples stored

Clinical outcomes up to 35 years later

- diabetes, vascular disease, cancer and all-cause death

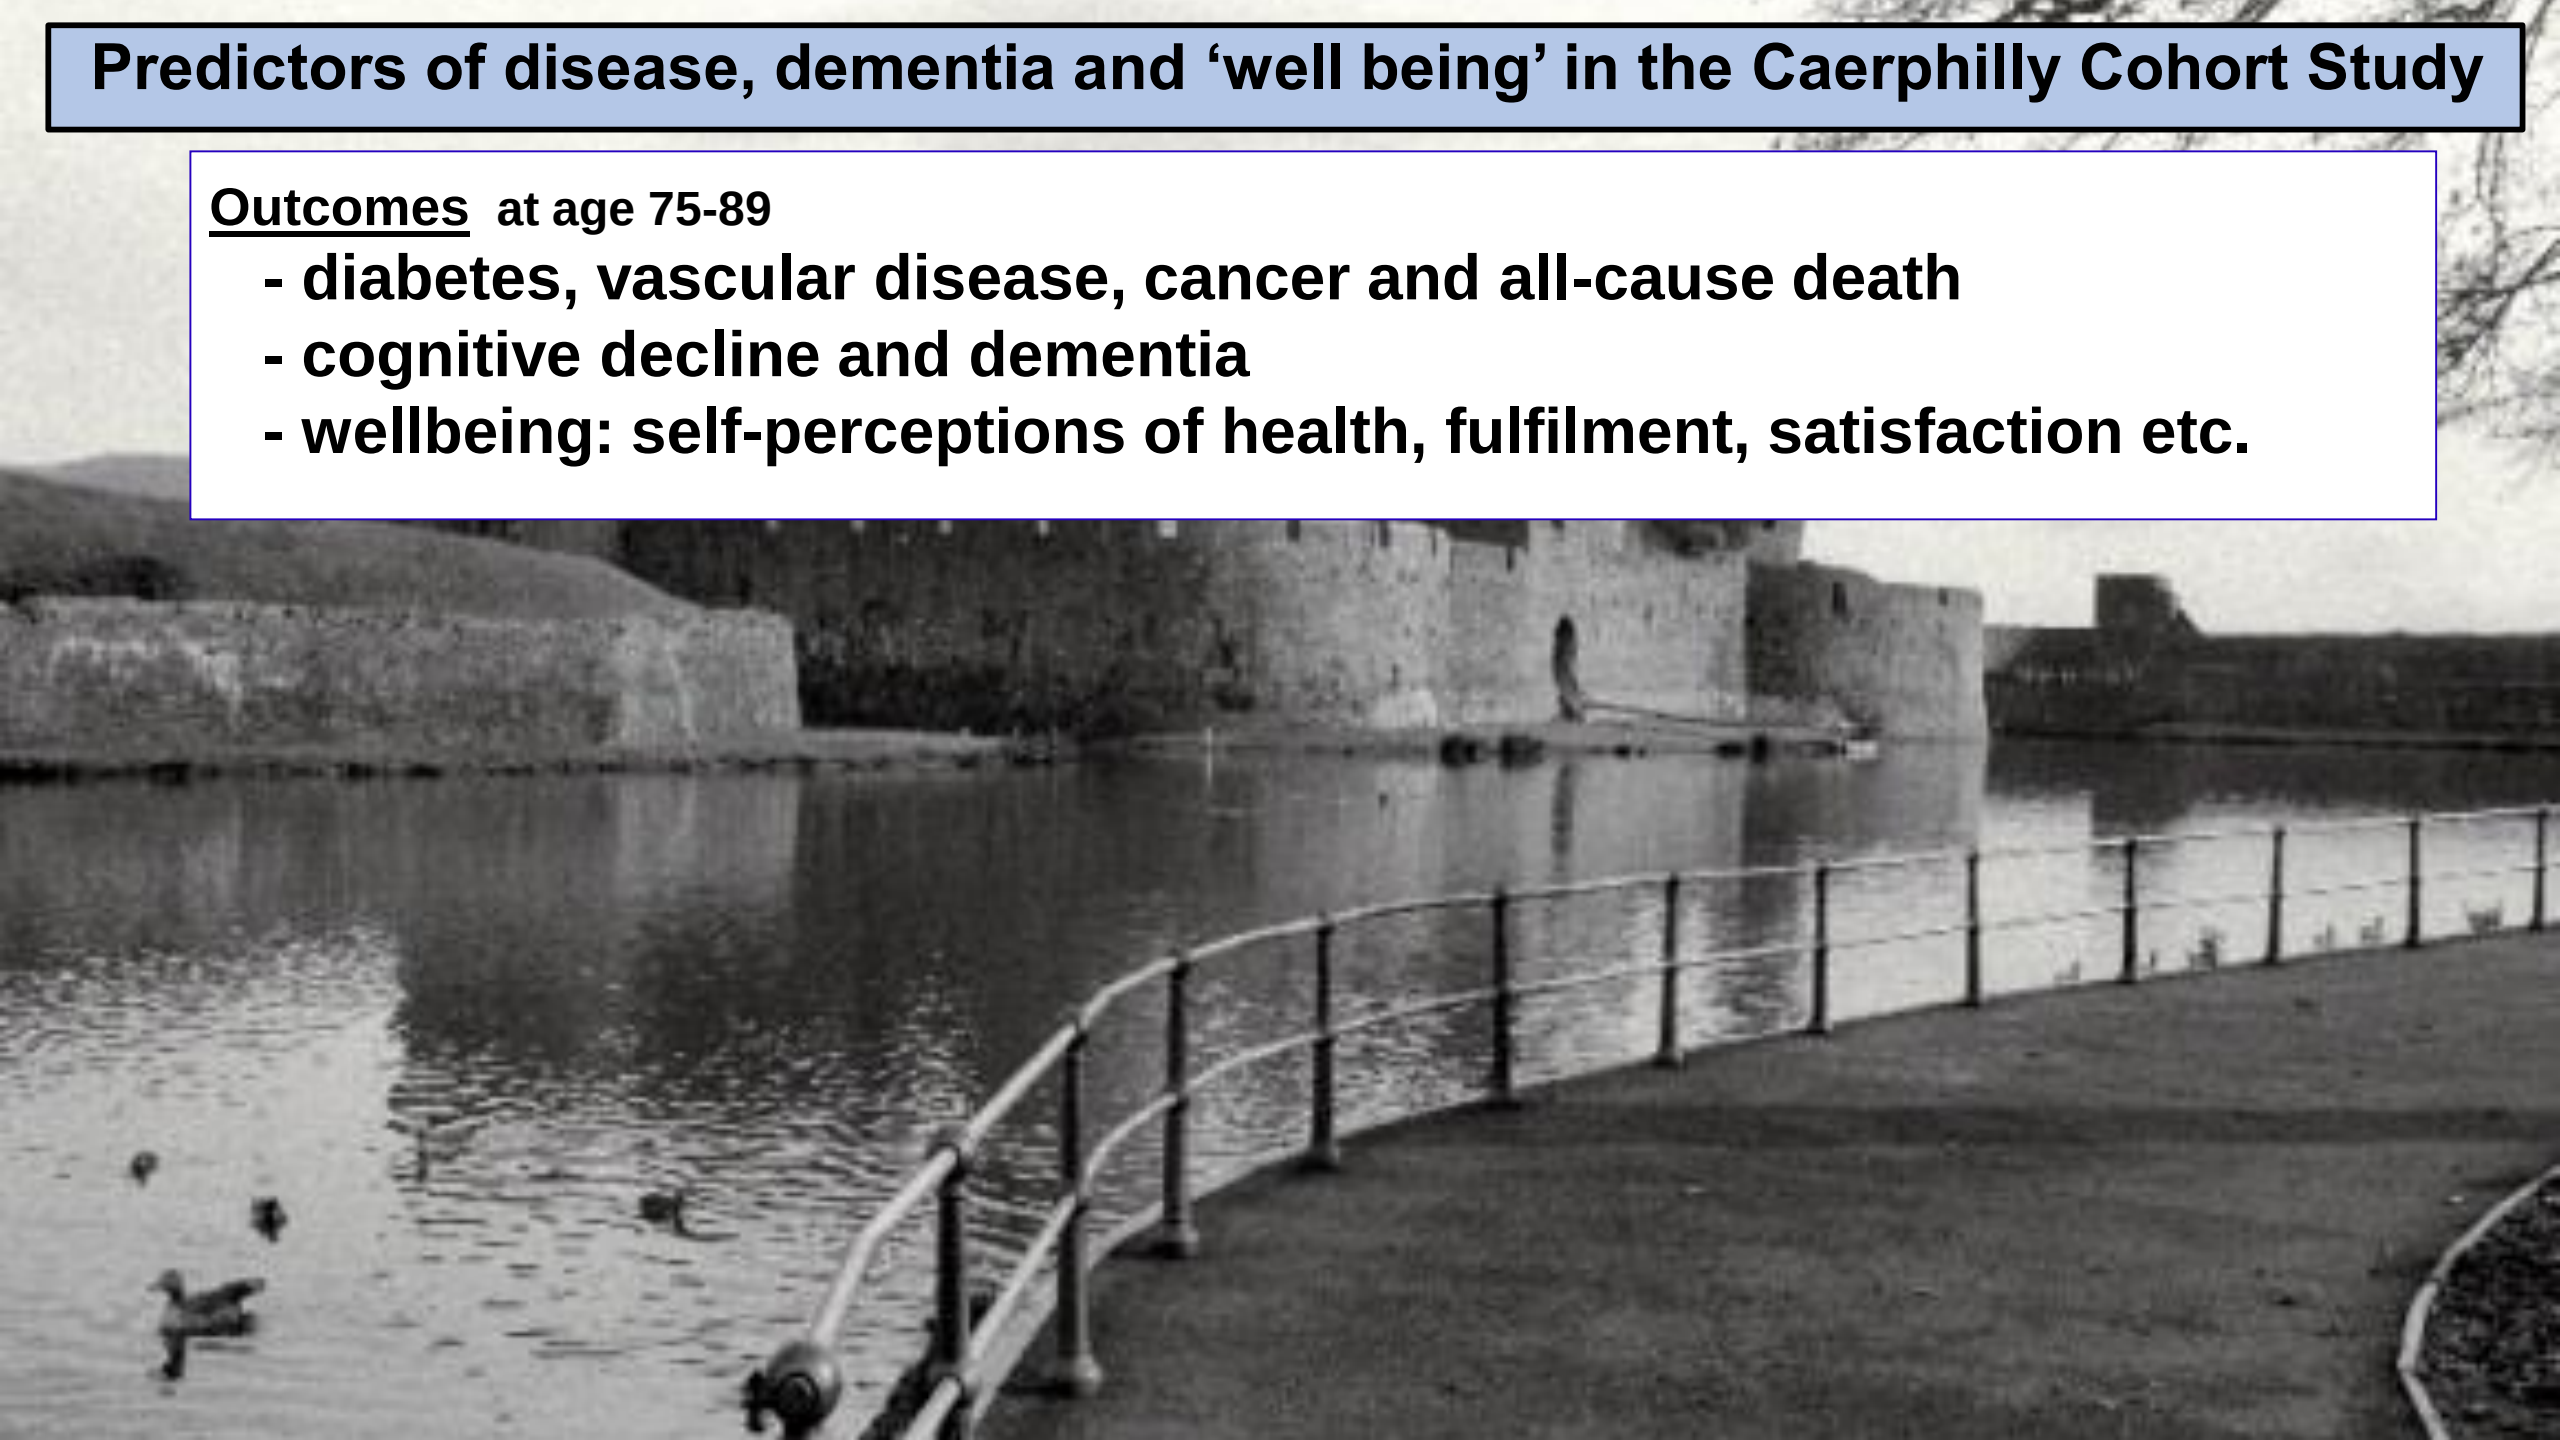
- cognitive decline and dementia; aspects of ‘wellbeing’

- wellbeing: happiness, satisfaction, fulfilment, physical/social activity

Predictors of disease, dementia and ‘well being’ in the Caerphilly Cohort Study

Outcomes at age 75-89

- diabetes, vascular disease, cancer and all-cause death
- cognitive decline and dementia
- wellbeing: self-perceptions of health, fulfilment, satisfaction etc.



Predictors of disease, dementia and 'well being' in the Caerphilly Cohort Study

Outcomes **at age 75-89**

- **diabetes, vascular disease, cancer and all-cause death**
- **cognitive decline and dementia**
- **wellbeing: self-perceptions of health, fulfilment, satisfaction etc.**

Predictive factors **20-30 years previously**

- Social factors and contacts: marriage, family size, social class etc.
- Lifestyle: smoking, exercise, diet, BMI, alcohol
- Baseline mood: GHQ, depression, anxiety
- Auditory Threshold
- Disturbed sleep:
- Leisure and social activities: 'intellectual', physical, social
- Vascular disease:
- 'Sticky blood':
- inflammatory markers
- Head injury
- proximity of green places

Predictors of disease, dementia and 'well being' in the Caerphilly Cohort Study

Outcomes at age 75-89

- **diabetes, vascular disease, cancer and all-cause death**
- cognitive decline and dementia
- wellbeing: happiness, satisfaction, fulfilment, physical/social activity

Predictive factors 20-30 years previously

- Social factors and contacts: marriage, family size, social class etc.
- **Lifestyle:**
- Baseline mood: GHQ, depression, anxiety
- Auditory Threshold
- Disturbed sleep:
- Leisure and social activities: 'intellectual', physical, social
- Vascular disease:
- 'Sticky blood':
- inflammatory markers
- Head injury
- green places

Predictors of disease, dementia and 'well being' in the Caerphilly Cohort Study

Outcomes at age 75-89

- **diabetes, vascular disease, cancer and all-cause death**
- cognitive decline and dementia
- wellbeing: happiness, satisfaction, fulfilment, physical/social activity

Predictive factors 20-30 years previously

- Social factors and contacts: marriage, family size, social class etc.
- **Lifestyle: Non-smoking**
- Baseline m **Maintenance of a low BMI**
- Auditory Th **Regular physical exercise**
- Disturbed s **A 'healthy' diet**
- Leisure and **A low alcohol intake**
- Vascular disease:
- 'Sticky blood':
- inflammatory markers
- Head injury
- green places

Predictors of disease, dementia and 'well being' in the Caerphilly Cohort Study

Outcomes at age 75-89

- **diabetes, vascular disease, cancer and all-cause death**
- cognitive decline and dementia
- wellbeing: happiness, satisfaction, fulfilment, physical/social activity

Predictive factors 20-30 years previously

- Social factors and contacts: marriage, family size, social class etc.
- **Lifestyle:** Non-smoking
- Baseline m Maintenance of a low BMI
- Auditory Th Regular physical exercise
- Disturbed s A 'healthy' diet
- Leisure and A low alcohol intake
- Vascular disease:
- 'Sticky blood':
- inflammatory markers
- Head injury
- green places

An 'Unhealthy' lifestyle
None or only one behaviour

A 'Healthy' lifestyle
Four or five of the behaviours

Predictors of disease in the Caerphilly Cohort Study

Reductions in chronic diseases

HEALTHY LIFESTYLE (consistent)	Diabetes (214 men)	Vascular disease (752 men)	Cancer (648 men)	Cognitive decline (299 men)	Dementia (121 men)
'Unhealthy' (None or one behaviour)	100	100	100	100	100
'Healthy' (Four or five behaviours)	-72%	-67%	-35%	-56%	--65%
Significance of trend	*0.001*	*0.0005*	*0.88*	*0.001*	*0.006*

All relationships adjusted for age, social class and other confounding factors

Healthy Lifestyles Reduce the Incidence of Chronic Diseases and Dementia: Evidence from the Caerphilly Cohort Study. Elwood, Galante, Pickering, Palmer, Bayer, Ben Shlomo, Longley, Gallacher. 2013. https://doi.org/10.1371/journal.pone.0081877

Predictors of disease in the Caerphilly Cohort Study

Reductions in chronic diseases

HEALTHY LIFESTYLE (consistent)	Diabetes (214 men)	Vascular disease (752 men)	Cancer (648 men)	Cognitive decline (299 men)	Dementia (121 men)
'Unhealthy' (None or one behaviour)	100	100	100	100	100
'Healthy' (Four or five behaviours)	-72%	-67%	-35%	-56%	--65%
Significance of trend	*0.001*	*0.0005*	*0.88*	*0.001*	*0.006*

All relationships adjusted for age, social class and other confounding factors

Healthy Lifestyles Reduce the Incidence of Chronic Diseases and Dementia: Evidence from the Caerphilly Cohort Study. Elwood, Galante, Pickering, Palmer, Bayer, Ben Shlomo, Longley, Gallacher. 2013. https://doi.org/10.1371/journal.pone.0081877

Predictors of disease in the Caerphilly Cohort Study

Reductions					
HEALTHY BEHAVIOURS (Consistent)*	**Diabetes** (214 men)	**Vascular disease** (752 men)	**Cancer** (648 men)	**Cognitive decline** (299 men)	**Dementia** (121 men)
'Healthy' (Four or five behaviours)	*-72%*	*-67%*	*-35 %*	*-56%*	*--65%*

OTHER BENEFITS OF A HEALTHY LIFESTYLE:

Delays in the onset of disease

- *vascular disease events delayed by an average of 13 years*
- *death delayed by an average of 6 years*

More men retire disease free

- *10% of subjects who had neglected healthy living*
- *23% of those who had followed a healthy lifestyle*

Healthy Lifestyles Reduce the Incidence of Chronic Diseases and Dementia: Evidence from the Caerphilly Cohort Study. Elwood, Galante, Pickering, Palmer, Bayer, Ben Shlomo, Longley, Gallacher . 2013. https://doi.org/10.1371/journal.pone.0081877

Predictors of disease in the Caerphilly Cohort Study

Reductions					
HEALTHY BEHAVIOURS (consistent)	**Diabetes** (214 men)	**Vascular disease** (752 men)	**Cancer** (648 men)	**Cognitive decline** (299 men)	**Dementia** (121 men)
'Healthy' (Four or five behaviours)	*-72%*	*-67%*	*-35 %*	*-56%*	*--65%*

OTHER BENEFITS OF A HEALTHY LIFESTYLE:

Disease burden in the community reduced

- if the subjects in the Caerphilly cohort had each been urged to take up one additional healthy behaviour…. and If only half had done so, there would have been, over the next 30 years…..

Healthy Lifestyles Reduce the Incidence of Chronic Diseases and Dementia: Evidence from the Caerphilly Cohort Study. Elwood, Galante, Pickering, Palmer, Bayer, Ben Shlomo, Longley, Gallacher . 2013. https://doi.org/10.1371/journal.pone.0081877

Predictors of dementia in the Caerphilly Cohort Study

Chronic disease and Dementia 15-20 years later

diabetes	**13.6%**	vs	9.1% in subjects with no diabetes
vascular disease	**17.0%**	vs	7.5% in subjects with no vasc. disease
hypertension	**13.6%**	vs	7.8% in normotensive subjects

Vascular disease and cognitive function in oolder men in the Caerphilly cohort. Age and Ageing 2001;31:43-6.

Predictors of dementia in the Caerphilly Cohort Study

Chronic disease and Dementia 15-20 years later

diabetes	**13.6%**	vs	9.1% in subjects with no diabetes
vascular disease	**17.0%**	vs	7.5% in subjects with no vasc. disease
hypertension	**13.6%**	vs	7.8% in normotensive subjects

1. **The risk of dementia is increased by about 50% in men with diabetes[1]**
2. **Almost 70% of new diabetes is attributable to overweight[1]**
3. **In diabetes, good control of blood glucose reduces the risk of cognitive loss[2]**
4. Primary care-led intensive weight management led to remission in 50 % of patients[3]

1. Vascular disease and cognitive function in older men in the Caerphilly cohort. Age and Ageing 2001;31:43-6.
2. Glucoregulation has greater impact on cognitive performance than macro-vascular disease in men with type 2 diabetes: data from the Caerphilly study. Gallacher et al. Eur J Epidemiol 2005;20:761-8
3. Primary care-led weight management for remission of Type 2 diabetes Lancet Dec 5.2017

Predictors of dementia in the Caerphilly Cohort Study

Auditory threshold at baseline and dementia 15-20 years later

Baseline auditory threshold assessed at 4 frequencies, twice at a 10 year interval

.

Risk of dementia in men with baseline auditory threshold above median:

OR 2.67 (1.38, 5.18) after adjustments for possible confounding

Further analyses suggested that the relationship was for non-vascular dementia **OR 2.23** (1.04, 4.77)

Auditory threshold, phonologic demand and incident dementia. Neurology 2012;79(15):1583-90

Predictors of dementia in the Caerphilly Cohort Study

Disturbed sleep at baseline and dementia 15-20 years later

20% of the men reported ‘disturbed’ sleep at base-line

OR for vascular dementia 2.04 (1.05, 3.98)

30% complained of ‘severe’ daytime sleepiness at base-line

OR for vascular dementia 4.4 (2.05, 9.61)

No relationships detected with non-vascular dementia

Sleep disturbance and daytime sleepiness predict vascular dementia.
J Epidemiol Com Hlth. 2011;65:820-4.

Predictors of dementia in the Caerphilly Cohort Study

Blood rheology, cognitive loss and dementia 15-20 years later

Haematocrit: sig. reduction in cognitive function at highest levels *P<0.05*

Plasma viscosity: sig reduction at highest levels *P<0.05*

Cognitive function and blood rheology: results from the Caerphilly cohort of older men. Age and Ageing 2001;30:135-9.

Predictors of dementia in the Caerphilly Cohort Study

Haemostatic and inflammatory indices and dementia

On the basis of an analysis of 15 haemostatic tests:

'… the coagulation pathways of clotting activity….. increase the risk of vascular dementia……' [2.3]

On the basis of an analysis of six inflammatory tests:

No significant association with inflammatory markers[2]

2. Cognitive function and blood rheology: results from the Caerphilly cohort of older men. Age and Ageing 2001;30:135-9.

2. Is sticky blood bad for the brain? Arterioscler Thomb Vasc Biol 2010;30:599-604

3. Editorial: Is sticky blood a treatable determinant of cognitive decline and of dementia. Age and Ageing 2001;30:101-3

Predictors of dementia in the Caerphilly Cohort Study

Haemostatic and inflammatory indices and deme

On the basis of an analysis of 15 haemostatic tests:

'… the coagulation pathways of … the risk of vascular dementi… of vascular deme…

…roinfarct model

On the basi… …matory tests:

…with inflammatory markers[2]

'Sticky blood' and dementia: '…a testable hypothesis!'[3]

Gordon Lowe, Haematologist, University of Glasgow

2. Cognitive function and blood rheology: results from the Caerphilly cohort of older men. Age and Ageing 2001;30:135-9.

2. Is sticky blood bad for the brain? Arterioscler Thomb Vasc Biol 2010;30:599-604

3. Editorial: Is sticky blood a treatable determinant of cognitive decline and of dementia. Age and Ageing 2001;30:101-3

Predictors of wellbeing in the Caerphilly Cohort Study

Outcomes **at age 75-89**

- diabetes, vascular disease, cancer and all-cause death
- cognitive decline and dementia
- **‘wellbeing’:**

BETTER THAN ANY PILL...
and no side effects!
The Benefit of a healthy lifestyle
being an account of 30 years of research in Caerphilly
CARDIFF UNIVERSITY
PRIFYSGOL CAERDYDD

The challenge from Caerphilly to the people of Wales:

Take up one additional healthy behaviour…..

….cut smoking… reduce weight…. exercise more….
….check your diet…. reduce alcohol intake…

Then, when well embedded into your lifestyle, take up another healthy behaviour….. and reap the benefits now and into old age!

….and the undesirable effects?

….none for you

but an extra decade of care and cost for your children!

Click on this manual and read how you can protect your own health

A medical research study in Caerphilly has shown a healthy lifestyle gives marked protection against diabetes, heart attacks, strokes, cancer and dementia.

In this website we offer advice and encouragement about how to develop a more healthy way of living and we encourage you to start by first taking up just one additional healthy behaviour… *and then another!*

So do read on…….

On another website we give information about the health benefits to older people of a small daily dose of aspirin:

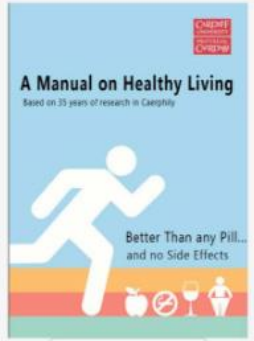
Click on this booklet and read about the 35-year medical study in Caerphilly

Healthy Living Wales

Dementia

In Caerphilly, the men who followed a healthy lifestyle had huge protection from loss of brain power - almost 70% less dementia!



Download PDF »

And the men who followed a healthy lifestyle but still got dementia were, on average, seven years older that those who had followed none of the behaviours and got dementia.

A good principle is 'Use it or lose it!'

If you really want to preserve your brain power then keep it active. Men who spend their leisure time actively lose much less nouce.... and face it.... sitting watching TV is not active leisure.... No way!

CONCLUSIONS

1. **A healthy lifestyle is associated with large reductions in disease and disablement**

   - only 5% of people in Wales follow a healthy lifestyle

   - yet a healthy lifestyle is under a subjects control, costs nothing and has no undesirable side effects!

CONCLUSIONS

1. **A healthy lifestyle is associated with large reductions in chronic disease**

   - only 5% of people in Wales follow a healthy lifestyle
   - yet a healthy lifestyle is under a subject's control, costs nothing and carries no undesirable side effects

2. **Many factors are predictive of dementia**

   - a healthy lifestyle is associated with a reduction of 50-60% in cognitive function and in dementia
   - hypertension, vascular disease and diabetes increase the risk, probably by 50 – 100%
   ***diabetes would seem to be of particular interest** , increasing the risk by about 50%*
   - almost 70% of new diabetes is attributable to overweight
   - good control of blood glucose reduces cognitive loss
   - intensive dietary intervention can achieve remission of diabetes (Lancet two weeks ago)
   ***- a high blood rheology** appears to be a risk factor…. and this is testable*
   - other factors – social support, hearing loss, sleep disturbance may be predictive

   but the independent association of these and other possible factors needs to be determined

CONCLUSIONS

1. **A healthy lifestyle is associated with large reductions in chronic disease**

   - only 5% of people in Wales follow a healthy lifestyle
   - but a healthy lifestyle is under a subject's control, it costs nothing and carries no undesirable side effects

2. **Many factors are predictive of dementia**

   - a healthy lifestyle is associated with a reduction of 50-60% in cognitive function and in dementia
   - hypertension, vascular disease and diabetes increase the risk, probably by 50 – 100%
   diabetes would seem to be of particular interest , increasing the risk by about 50%
   - almost 70% of new diabetes is attributable to overweight
   - good control of blood glucose reduces cognitive loss
   - intensive dietary intervention can achieve remission of diabetes (Lancet tw weeks ago)
   - a high blood rheology appears to be a risk factor…. and this is testable
   - other factors – social support, hearing loss, sleep disturbance may be predictive
   but the independent association of these and other possible factors needs to be determined

3. **There is no accepted definition of 'wellbeing'**

   - it is dependent upon the perception of health, of satisfaction, the level of self-efficacy, and a positive attitude
   - again, a healthy lifestyle appears to be associated with increases in some of these aspects

again, the independent association of these and other possible factors needs to be determined

CONCLUSIONS

1. A healthy lifestyle is associated with large reductions in chronic diseas

- *only 5% of people in Wales follow a healthy lifestyle*
- *a healthy lifestyle is under a subjects control, it costs no*

2. Many factors are predictive of dementia

- *a healthy lifestyle is associated*
- *hypertension, vascular di*

again, the indep* *association of these and other possible factors needs to be determined

HEALTHY LIVING? - WHAT A BLUNT INSTRUMENT!

- What about residual confounding?
- What about reverse causality?
- No biological mechanisms have been identified!
- No protein or enzyme can yet be been targeted!

Let's wait for better understanding.....

....let's wait for a silver bullet!

Healthy living
Better than any pill… and no side effects!
